

Balázs Édes

Java • Scala • Typescript • Javascript Developer

About

Experience

Morgan Stanley - Scala dev

2013 - 2015

I work here as a Scala developer. Learned Scala during my time here, and grew fond of it. Occasionally I do smaller JavaScript tasks, using the Ext.js framework.

evosoft - Java dev

2013 - 2015

I spent my time here working as a Java developer. The main focus of the job was implementing new features for and maintaining a long running system used for designing railways. The project was using eclipse RCP, I worked on several areas of it: graph visualization using GEF, various UI features and business logic. I also worked on implementing a DSL (and it's infrastructure) for automating processes using the same eclipse environment and Xtext.

eClick - Mobile & web dev

2012 - 2013

I started here, while I was a student. I worked on various web and mobile projects. Some of the tools and libraries I used: jQuery, Twitter Bootstrap and Angular for the frontend, Titanium as a mobile development platform targeting multiple brand of devices, Corona SDK for making 2D mobile games, and Java and the Android SDK, when targeting purely the Android platform.

Skills

These are the technologies, that I spent time with during my career. I find modern web solutions, especially interesting. My other passion is the analysis, design of tooling for domain specific languages (DSL)

Programming languages: java scala xtend

Scripting languages: es5 es6 typescript lua

Frameworks: eclipse rcp xtext angular ext.js

Languages

These are the languages, that I speak and understand.

English

I speak it fairly decently, since my place of current employment uses English as the standard language.

German

I learned German for an extensive period of 8 years in school.

Hungarian

Hungarian is my native language.

Education

Eötvös Loránd University (ELTE)

2010 - 2014 - Computer Scientist - Bachelor degree
